Buddy - https://buddy.works/ - Continuous Integration

LogRocket - https://logrocket.com/ - Real Time Error Monitoring

Buddy is a CI/CD tool for full stack application developers. Entry threshold to DevOps. It uses delivery pipelines to build, test and deploy software.

- Easy configuration in clear & telling UI/UX
- Lightning-fast deployments based on changesets
- Builds are run in isolated containers with cached dependencies
- Supports all popular languages, frameworks & task managers
- Works with AWS, Google,Shopify, WordPress & more
- Supports YAML configuration

Log Rocket is a simple to add npm package that can be added to test deployments. To see

runtime errors and console.logs for error checking and debugging.

https://buddy.works/docs

Documentation is very clear and supports many languages, the guides are clear with images and code samples posted in a logical order for people to follow and learn.

https://docs.logrocket.com/reference/log

Like rollbar the logrocket has simple log methods that can be used to capture errors on test deployments of your application.

Buddy has outstanding documentation is a big win as well. It seems very popular based on google searches for CI tools and seems to be backed by a solid team of developers.

Log rocket like most software has been developed alongside the node ecosystem with an included npm package. Providing companies with a powerful tool for real time error monitoring
